DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species:

a pharmaceutical composition of a nitrogen mustard anticancer agent: orally, intravenous injection, drip infusion, intraarterial injection, intramuscular injection, intratumor injection, intrathoracic injection, or intraperitoneal injection, and a pharmaceutical composition comprising anti-IL-6 receptor antibody of intravenous injection, drip infusion, intramuscular injection, intraperitoneal injection, subcutaneous injection, local dosage-forms, external preparations, local injections, liniments, ointments, gel, cream, emulsions, and liquids, tapes, plaster tapes, patches, nebulas, sprays or powders.

The species are independent or distinct because they are different formulations for different routes of administration. Since the antibody is macromolecules and the search of the various formulations in claim 16 not commonly used in the antibody art is not co-extensive with the antibody itself. The formulation of claim 15 recites small organic molecule i.e. nitrogen mustard as the main ingredient, however, the claim depends on claim 1, at least part drawn to "one pharmaceutical composition comprising antibody". In a nascent art, such as antibody formulation, search is required not only for anticipation or obvious rejection, but search of relevant art is also required for determination of whether the claimed invention is enable. The search required in each

of the formulation is divergent in the non-patent literature databases as well as the patent literature databases.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species from each of the two formulations comprising a nitrogen mustard, or the antibody for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
